## Defined Contribution Retirement Plan

## A Defined Contribution Retirement Plan

Presented By: [Licensed user's name appears here]

## Preface

A defined contribution retirement plan is an asset accumulation program which has been granted special tax consideration. It has these characteristics:

## Deductible Contributions

Funding costs within prescribed limits are deductible from current taxable income. (Certain nondeductible contributions may be allowed.)

## Tax Deferred Growth

Earnings are not subject to current income tax.

## Taxation At Distribution

Income tax is assessed on plan distributions in excess of nondeductible contributions.

## Form of Distribution

There are three: 1) lump sum; 2) payments from an annuity contract; and 3 ) withdrawal.

## Distribution Requirements

Distributions should start between ages $591 / 2$ and age $701 / 2$. Any amounts distributed prior to age $591 / 2$ are "premature distributions" and are generally subject to an additional $10.00 \%$ penalty tax. If distributions
commence after $701 / 2$, a $50 \%$ penalty tax is assessed on the minimum amount that should have been distributed.

## Required Minimum Distributions

Plan values divided by certain life expectancy factors establishes a minimum which must be distributed each calendar year. Life expectancy is based on either the age of the participant or the joint ages of the participant and a beneficiary. The participant may take more than the minimum at any time.

The required minimum distribution (RMD) is calculated using the Uniform Lifetime table. An exception is allowed if the beneficiary is the spouse and is more than ten years younger than the client. In these cases, the client can elect to use the actual joint table, which results in lower RMDs than the Uniform Lifetime table.

If a participant is willing to endure the many rules, regulations and potential penalties, these plans can be irresistible as a result of the dynamic combination of funding deductions and tax sheltered asset growth. The accompanying material should be helpful to you in analyzing your use of such a plan.

Note: All projections are based on client furnished data and assumptions.

## Preface

## In the accompanying presentation, you will see the financial data from an

 illustration of a cash value life insurance policy.To help you make an informed decision about acquiring the policy, the illustration includes information about premiums, cash values and death benefits plus scheduled policy loan proceeds.

Cash value life insurance contains the following features:

1. Accumulating cash values;
2. Income tax deferred growth of cash values;
3. Competitive current interest rate;
4. Income tax free access to cash values via policy loans;
5. Income tax free death benefits;
6. Probate free death benefits;
7. Privacy of all transactions.

Favorable income tax consequences combine with significant policy values and benefits to produce a life insurance solution that has a considerable amount of financial leverage.
